

SLATE, CAAD12

Correct BB Routing and Cable Guide - **KP412/**

Figure A.

About this Service Bulletin

This is an informational Service Bulletin. This is not a product recall. Please take the action indicated.

Actions to Take

Whenever assembling or servicing 2016-2017 model CAAD12 or SLATE models inspect the internal bottom bracket shell routing:

1. Make sure the internally routed rear brake line (3), rear derailleur (1), and front derailleur (2) cables exit the down tube through lower bottom bracket window (a). The cables (1,2,3) MUST NOT exit through the upper window (b) as this results in contact with the spindle (5). A SLATE bottom bracket is shown in the example; the CAAD12 BB does not have an upper window.
2. Make sure the rear brake line (3) is securely fastened to the cable guide **KP412/** with the cable tie (4) and the cable tie is tightened securely. No space should exist between cable guide **KP412/** and the rear brake line.
3. Any other internally routed cables, wires or housings must not come in contact with the spindle; this will result in abrasion damage.
4. **If the cables are routed incorrectly and damage has occurred to the spindle, remove and replace the damaged components with new ones and correct the routing.**

WARNING

SLATE specific: To avoid cutting the crank spindle in half, all cables and the rear brake line **MUST** exit the down tube through the lower window. The rear brake line must properly secured to the BB cable guide **KP412/** using a cable tie.

YOU CAN BE SEVERELY INJURED, PARALYZED OR KILLED IN AN ACCIDENT IF YOU IGNORE THIS MESSAGE.

WARNING

Information intended for use only by Authorized Cannondale Dealers. Special tools and skills are needed. Bike Owners must not perform the work described. Serious injury or damage can result.

If you have any questions, please call the appropriate contact for your region.
