

CODA TARANTULA™ CRANK INSTRUCTION SUPPLEMENT

We have made a running change to the production of 1999 CODA Tarantula Competition and Expert cranks. On approximately 9/01/98, we changed the stock 8/9 speed compatible spider to include a production date code in place of the “dimple” which aligns with the right crank arm (See Fig. 1 in the CODA Tarantula / CF2 crankset manual). This date code consists of a letter and a number. We also slightly changed the spacing between the middle and small chainrings to improve shifting and reduce the possibility of chain suck. This spider is part number QCSC9/EBO.

For warranty related questions or for more information on this or any CODA product, please feel free to contact us.
